

Which Platform Can Best Connect AMEL's Activist Network?

By Justin Hefter, Sam Posner, Mike Jiang, and Daniel Marquez

Key Questions

As The AMEL Project grows its activist network across Africa and the Middle East, they are seeking a social networking platform that can keep everyone connected. This platform must be social enough to generate relationships for people who can't meet in person, but secure enough to keep these activists safe.

- What are the activists' needs and expectations for a social network?
- Which networks provide a social experience that is also secure?
- What are the factors that motivate activists to continue to engage on a social network?
- Which network or strategy should AMEL employ to keep their activists connected and safe?

Three Key Methods Used to Assess Best Network

Surveys

- We conducted a pre-survey of the AMEL activists to understand their pre-existing preferences and needs for a social network
- We conducted a post-experiment survey to learn if any of the networks tested are viable for the future

Vetting Various Networks

- We vetted 11 different social networks in order to determine which networks to use for our experiment
- 8 of these networks were deemed unusable
- We ran an experiment with the remaining 3 networks

Controlled Experiment

- For two weeks, we divided 100 AMEL activists into three different social networks and observed their interactions
- Each social network was moderated, with the same questions being posed to each group to encourage engagement

Pre-Survey

They said digital security was crucial

What are the main problems that you have when using the above platforms? Please specify

41 responses

But few used Signal, the most secure platform

Please check all of the platforms that you use regularly

42 responses

Vetting Various Networks

- Within a 6-person team of MIT and AMEL participants, we tested and vetted 11 different prospective platforms for the AMEL activists
- 8 of those platforms were ruled unusable or uninteresting to the activists
- We then ran an experiment with the other 3 platforms

Post-Survey Results

Facebook

- **87%** (7/8) Would Use This Platform
- **75%** (6/8) Connected Privately with a fellow activist on the network
- Biggest Issue: **Security**
- Biggest Pro: **Ease of access**

AMEL Hub

- **100%** (6/6) Would Use This Platform
- **16%** (1/6) Connected Privately with a fellow activist on the network
- Biggest Issue: **Log-in Issues**
- Biggest pro: **Simple, Private & Less “noise” than Facebook**

Mattermost

- **50%** (2/4) Would Use This Platform
- **25%** (1/4) Connected Privately with a fellow activist on the network
- Biggest Issue: **UI/Style**
- Biggest pro: **Easy to use**

Conclusion & Next Steps

- **Security** is a goal, but not a deal-breaker for AMEL's activists
- **Moderation** is necessary to maintain engagement regardless of which platform AMEL chooses
- **AmelHub is exciting**, but will need improvements in order to work for everyone (e.g., easier login, iOS, group chat functionality, better sharing/liking options)
- **Facebook** allows for the greatest amount of **1-on-1 engagement** outside of the social network, which may be important for AMEL
- **Next Steps:** AMEL should continue to test these platforms moderated vs. unmoderated for a few more weeks before making its final decision
